

Kitchen waste for collection

The kitchen waste we collect is sent for biological treatment: digestion. From your kitchen waste we make biogas. Choose to have your kitchen waste collected and contribute to a better environment!

Only use the brown compostable bags when you deposit kitchen waste. Plastic bags ruin the treatment. Seal the brown bag before you put it in the bin. That makes the process more hygienic since the bin doesn't get dirty. Read more here: www.solna.se/matafall

Examples of kitchen waste:
